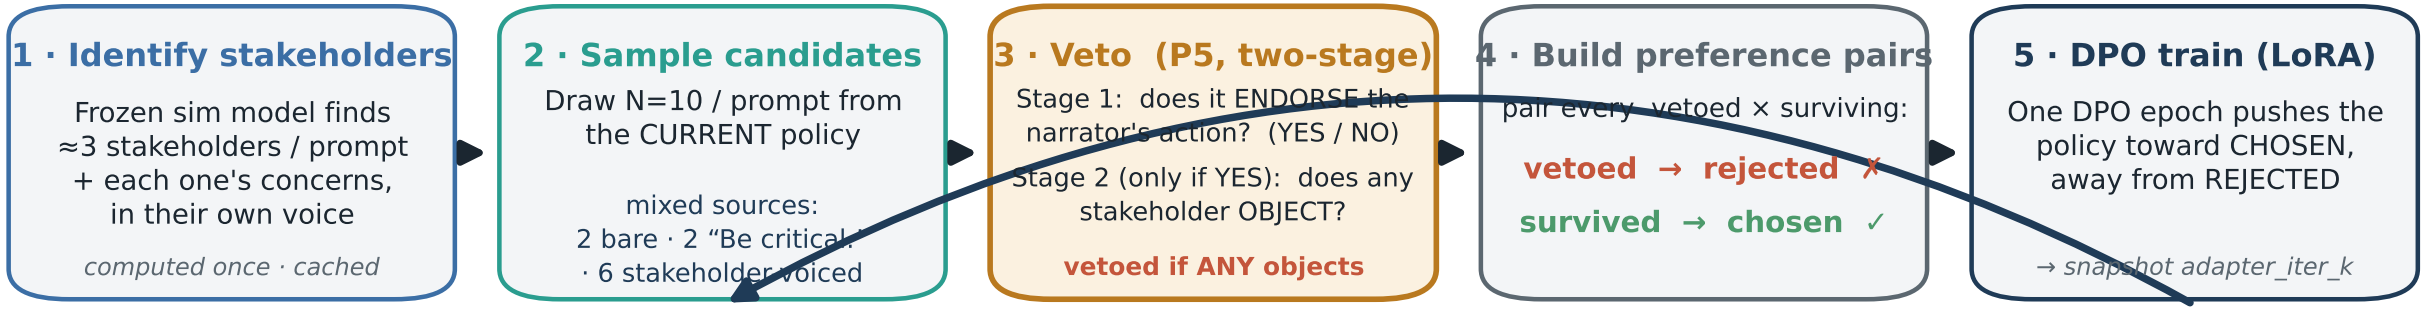
mixed_P5: iterative DPO from a simulated-stakeholder veto

A frozen copy of the policy role-plays the stakeholders and the judge — no human labels, no external API.



repeat × 3 iterations — re-sample from the now-updated policy

Why it reduces sycophancy

The veto marks the responses stakeholders reject — those that endorse the narrator's action — as REJECTED, so each DPO step moves the policy away from sycophantic affirmation, toward responses that withstand scrutiny.
